state in the chat.*

Key takeaways:

Thinking at scale: States and cities collaborating on shared issues - October 17, 2024

- **Combining lived experiences with data can help individuals and decision makers picture themselves in the story:** 10 Across looks at a wide range of complex issues facing municipalities and states along the Interstate-10 corridor in the southern US. They take an approach of “intersecting issue and place” and use storytelling and data to reflect the lived experiences of those in the region experiencing drought, storms, and increased demands on water management infrastructure. This approach can also reduce hyper-partisanship by humanizing the data.
- **When communicating on controversial issues, recruit diverse voices:** 10 Across has found that messages from the “expected” or “common” voices aren’t always effective with audiences, especially on issues like extreme heat and water management. Amplifying the voices of non-ideological experts that aren’t regularly prominent in a policy conversation may have more of an impact. For example, hearing from an Air Force Base Commander - a role that is typically viewed as neutral and non-partisan - on the threats of climate change can be an effective way to discuss what can be a politically divisive issue.
- **Offer a range of formats for storytelling:** To reach their broad audience, 10 Across collaborates with media partners to create a variety of assets like podcasts, videos, educational courses, data-rich maps and graphics, and events. This range of knowledge products creates traction with media and other organizations who can then use the assets in their own work or communications.

STATES FOR THE FUTURE

A Data to Policy Network

States for the Future is a **learning community** bringing state policy professionals together around **data**, **research**, and **action**.

Learn more & explore our data platform: www.statesforthefuture.org

Our Shared Values:

- We know that **good policy is grounded in quality data and research, not ideology.**
- We see the necessity of making data actionable and using it to drive toward **real-world solutions.**
- We believe that states should be guided by **long-term strategic plans** to address the many challenges they face.
- We value the role of tracking and **understanding equity gaps** in developing meaningful solutions.
- We recognize that there are multiple approaches to developing solutions. The **diversity of our organizations and states is a strength** that can be leveraged to achieve shared goals.
- We are committed to **collaborating and sharing best practices** so we can build capacity within our individual organizations and drive innovative policy-making

Today's Speaker:

Duke Reiter
Founder and Executive
Director

Ten Across is an initiative that seeks to address the shared issues of states that are touched by Interstate 10.

Ten Across convenes diverse perspectives to better share information and to inspire proactive decision-making for resilience and sustainability.

Larger proportions of those living in Southwestern states and southern "Ten Across" states experienced long periods of unusually hot weather, droughts and wildfires

In the past 12 months, has your local community experienced the following?

	Severe storms	Unusual heat	Drought	Flooding	Wildfires
Southwestern state	35%	53%	31%	15%	20%
Rest of U.S.	50%	35%	15%	21%	8%
Ten Across state	42%	56%	28%	17%	18%
Rest of U.S.	47%	32%	15%	21%	8%

Source: APM Research Lab analysis of McCourtney Institute's Mood of the Nation Poll, Jan. 11-17, 2024. N=1,000 U.S. adults age 18 or older; the overall margin of error is ±3.6 percentage points; larger for subgroups.

There are two fundamental elements of Ten Across learning, especially for high school students: 1) they see themselves and their communities in the curriculum via a process of re-discovery and problem-solving, and 2) their horizons are broadened in the course of a dynamic exchange of observations, experiences, research, and narratives across cultures and landscapes—both digitally and via travel.

Items:

- issue/place curricular matrix established
- curriculum combining issue + place in process
- STEM standards addressed
- potential students reach- 100K
- transect-wide remote delivery via Prep Digital
- real time exchange technology at scale
- integration into major metro school systems
- coordinators/contributors in major metros
- network of subject experts
- storymaps supplementing curriculum (ESRI)*
- advanced multi-versity course
- national presentation of findings/papers
- laboratory for learning outcomes
- income streams from content purchasers
- free distribution options w/ tech partners
- local community foundation endorsements

Local filmmaking prowess extended to the city's Black community.

7.1: Upstream

7.1.2: SUSTAINABILITY - ENERGY Technological Solutions to Tec... The Energy Transition Tradeoffs in Energy Sustainabi... DEGREE /

These steps are required because fracking does not tap **conventional reserves** ("deposits of crude oil or natural gas that can be extracted by vertical drilling and pumping") but rather **unconventional reserves** trapped in denser rock layers.

Once these layers are initially weakened by explosions, 4 to 5 million gallons of water containing a mix of sand and chemicals (some of them toxic) are injected into the well under high pressure. The sand enters the small fractures, holding them open, while the water helps flush out the oil or natural

7.1: Upstream

7.1.1: ECONOMICS - MICROECONOM... Fracking and the Energy Supply... Boom or Bust Communities The Price of Fracking The Econo...

The Permian Basin has been producing oil since the 1920s, supporting the economies of many towns and cities in New Mexico and Texas.

The quickly changing nature of international oil markets, however, has frequently introduced volatility into local economies [2]

After all, beavers in mountain streams may be critical for the lives of desert dwellers thousands of miles away.

7.1: Upstream

7.1.1: ECONOMICS - MICROECONOM... Fracking and the Energy Supply... Boom or Bust Communities The Price of Fracking The Econo...

Since the Permian began producing oil in the early 1920s, booms and busts have been an unpredictable yet recurring certainty, like the tumbleweeds that blow across the desert. Long-abandoned ghost towns are strewn across the arid landscape, reminders of the toll of past oil-price collapses...

Resilient American Futures A course for all.

The complete *Resilient American Futures* survey course is available to learners everywhere for online enrollment now. Ten Across education products are designed, from individual thematic units to entire courses, to adapt for collaborative uses in secondary and higher education environments throughout the I-10 geography and beyond.

**Resilient American Futures:
An Academic Road Trip**

Chapter by chapter, this flagship course virtually visits 12 major cities along the Ten Across transect, using each as a lens through which to investigate a key resilience and sustainability challenge. In lieu of a conventional textbook, course content is presented entirely online, using Esri's visually immersive and geography-based ArcGIS StoryMaps platform, paired with customized interactive learning activities.

As it moves through its compelling narratives, the course introduces students to the roles played by more than 60 academic fields—diverse professions making vital yet often unseen contributions to the strength of Ten Across communities.

Students early in their higher education journeys will discover varied applications for their own interests, talents and perspectives—all indispensable to defining our collective future.

“My favorite aspect of this class was the wide array of topics and methods discussed. Not only sustainability issues, but also urban design, government, transportation, security and culture. This is just a really great foundation for not only the study of the course, but also useful and applicable knowledge.”

—Student Feedback – Fall Semester 2022

CGF 110 is without a doubt **the best college course I have taken.**"

Student Feedback, Spring Semester 2024

This course was **one of the most interesting and engaging courses I have ever taken.** I have learned more about the U.S. in eight weeks than in all the years I have lived here. The interactive nature of the course, including its assignments and engaging storytelling, made it feel like an immersive road trip.

Student Feedback, Spring Semester 2024

The things I learned in this course I find to be **invaluable to my continued success** as a college student, researcher, and thinker. The scope of the course was broad, ambitious, and interesting. I really enjoyed our assignments, and found the content to be fascinating, and especially useful as I think about problems in the future facing different sectors or aspects of American society."

Student Feedback, Spring Semester 2024

I loved the degree and career path portion of each textbook chapter. It shows us how everything is interrelated and allows people to see where they can use their talents and interests to fit into the picture. [It should] be a **required first-year course for freshmen,** especially if they are undeclared. Honestly, it would be a great class for students to take in high school as they ponder their choice of major."

THE LAB'S PARTNERSHIP WITH TEN ACROSS

What is 10X?

The Ten Across initiative frames the U.S. Interstate 10 corridor, stretching from Los Angeles to Jacksonville, as the premier observatory for our collective capacity to imagine a more resilient future and inclusive society.

Points of reference: Anti-boycott legislation and Texas' ESG Blacklist

In August, Texas Comptroller Glenn Hegar released a “blacklist” of financial firms with plans to divest state pension funds from those companies based on the state's 2021 anti-boycott law. This legislation, which now may be serving as a model for similar legislation in other states, prohibits state investment with firms that boycott energy companies.

Following the demand: The ins and outs of warehouse automation

Last month, Amazon announced a major milestone in warehouse automation – the introduction of a robotic system that can recognize and handle distinct objects. With recent strides in automation like those made by Amazon, will warehouse automation have a role in the growing supply chain? Like any technology, warehouse automation has its critics, who question its efficiency, safety and impact on workers.

Back to school: Expansive Arizona program puts universal school choice under the microscope

With notable growth in state- and tax-funded financial aid just in the last year, school choice has become increasingly political. Questions regarding its accountability and effectiveness have been studied for years, but Arizona's new legislation, set to take effect Sept. 24, has produced additional scrutiny. There is already a mounting effort to repeal this law.

Autonomous trucking: Is it steering technology in the right direction?

Autonomous trucks are quickly beginning to infiltrate America's roadways. The technology has made most gains in light trucking and has been more slowly implemented in heavy trucks, with many companies using Interstate Highway 10 to test it. But just how feasible and safe is autonomous trucking technology? And how will automation impact the industry's inability to recruit and retain truck drivers?

Insurance aflame: Coverage inequities rage as population grows in wildfire regions

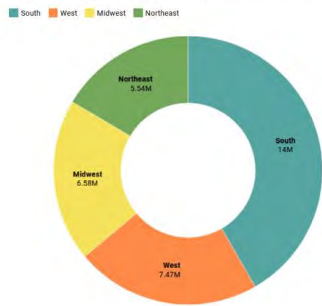

A 2015 study confirmed that fire seasons have lengthened by more than a month in parts of the western U.S. compared to 35 years ago. But just as wildfires have increased, so have the number of people moving to high-risk fire areas along the West Coast. Meanwhile, adequate insurance for wildfire damage appears to be harder to come by in recent years.

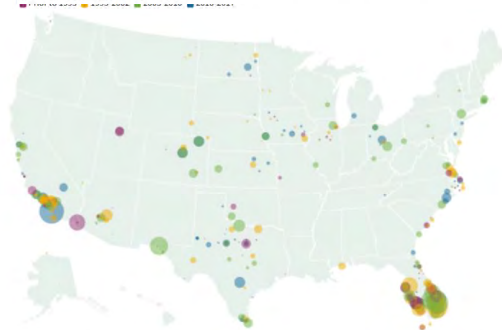

Why does the U.S. lag other nations so badly in the automations of its ports? (And is that good or bad?)

Supporters of automation praise its eco-friendly efficiency. However, according to the 2021 Container Port Performance Index, three of four American ports that incorporate automated technologies rank low for overall efficiency compared to both automated and unautomated ports in other countries. So, why is that the case?

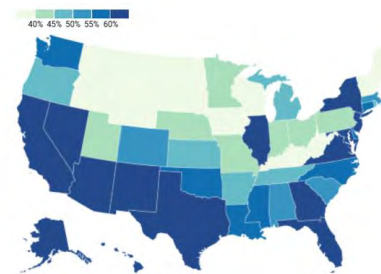

FEELING THE HEAT: ENERGY INSECURITY IN THE NATION'S HOTTEST STATES

THE U.S. IS FACING A WATER CRISIS: COULD DESALINATION BE A SOLUTION?

BY THE CENSUS: INCREASINGLY METROPOLITAN AND DIVERSE POPULATION FORESHADOWS UNITED STATES' FUTURE

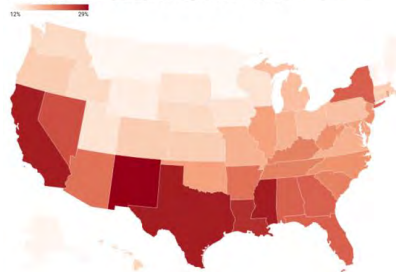

POLL: A MAJORITY SUPPORT FEDERAL INVOLVEMENT IN DEALING WITH WATER SHORTAGES AND FLOODING

How much of a role should each of the following play in determining how much of the available water goes to each state and community?

READING THE NUMBERS: 130 MILLION AMERICAN ADULTS HAVE LOW LITERACY SKILLS, BUT FUNDING DIFFERS DRASTICALLY BY STATE

POLL: STORMS, HEAT, DROUGHT, FLOODS AND WILDFIRES ALL COMMON EXPERIENCES IN 2023

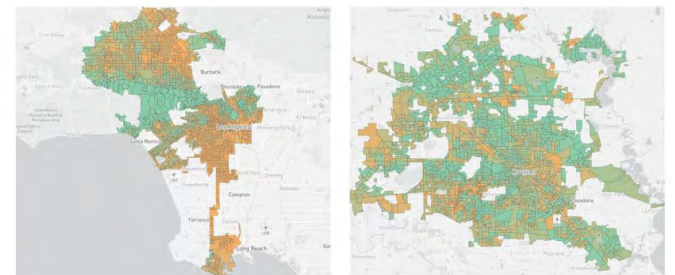

POLL: STORMS, HEAT, DROUGHT, FLOODS AND WILDFIRES ALL COMMON EXPERIENCES IN 2023

Forty percent of Americans experienced two or more extreme weather events in 2023

TREE EQUITY: HOW ARE SOME OF AMERICA'S HOTTEST CITIES USING IT TO PROTECT VULNERABLE COMMUNITIES?

aspirational illustration

The Ten Across Observatory continuously scans the 2400-mile transect, with resiliency as the primary lens. Skilled staff gather and probe critical issues and topical events to reveal emergent trendlines, compelling correspondences, and research targets. The Observatory is the engine which drives both Ten Across media and educational enterprises and ensures their contemporary relevancy/urgency.
